

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method to identify a previously visited URL in results from a search, comprising:

loading a URL personal databook collection object in response to receiving the results of a network search by a search engine; and

identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.

2. (Original) The method of claim 1, further comprising comparing the results from the search to any URL object references in the URL personal databook collection object to identify any matches.

3. (Currently Amended) The method of claim 1, further comprising ~~identifying~~ visually identifying any matches in the results from the search.

4. (Original) The method of claim 3, further comprising visually identifying any matches by at least one of a predetermined icon, a predetermined text font and highlighting.

5. (Original) The method of claim 3, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search.

6. (Original) The method of claim 1, further comprising selecting any results from the search containing content of interest for future reference in response to no matches.
7. (Original) The method of claim 6, further comprising storing any selected search results in the URL personal databook collection object.
8. (Original) The method of claim 7, wherein storing any selected search results comprises storing a URL reference.
9. (Original) The method of claim 8, further comprising storing the URL reference as a serialized object.
10. (Original) The method of claim 7, further comprising storing any comments in association with the stored search results.
11. (Currently Amended) A method to identify a previously visited URL in results from a search, comprising:

comparing the results from ~~the~~ a network search by a search engine to any URL object references of previously visited URLs in a URL personal databook collection object; and

~~identifying~~ visually identifying any matches between the results from the search and any URL object references in the URL personal databook collection object.
12. (Original) The method of claim 11, further comprising loading the URL personal databook collection object in response to presenting the results from the search.
13. (Original) The method of claim 11, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search.

14. (Original) The method of claim 11, further comprising:
- selecting any results from the search containing content of interest for future reference in response to no matches; and
- storing any selected search results in the URL personal databook collection object.
15. (Original) The method of claim 14, further comprising:
- presenting a dialogue box to enter comments related to any stored search results; and
- storing any comments in association with the stored search results.
16. (Currently Amended) A system to identify a previously visited URL in results from a search, comprising:
- a processor;
- a data structure operable on ~~[[a]]~~ the processor to compare results from ~~the~~ a network search by a search engine to any URL references of previously visited URLs stored in a URL personal databook collection object; and
- a data structure operable on the processor to identify any matches between the results from the search and any URL references stored in the URL personal databook collection object.
17. (Currently Amended) The system of claim 16, further comprising a data structure operable on the processor to ~~identify~~ visually identify any matches in the results from the search.
18. (Currently Amended) The system of claim 16, further comprising a data structure operable on the processor to present any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search.

19. (Currently Amended) The system of claim 16, further comprising a data structure operable on the processor to select any results from the search containing content of interest for future reference in response to no matches.

20. (Currently Amended) The system of claim 19, further comprising a data structure operable on the processor to store any selected search results in the URL personal databook collection object.

21. (Currently Amended) The system of claim 20, further comprising a data structure operable on the processor to store and comments in association with the selected search results.

22. - 27. (Canceled)

28. (Currently Amended) A computer-readable medium having computer executable instructions for performing a method comprising:

comparing the results from ~~the~~ a network search by a search engine to any URL object references in a URL personal databook collection object; and

~~identifying~~ visually identifying any matches between the results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.

29. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 28, further comprising loading the URL personal databook collection object in response to presenting the results from the search.

30. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 28, further comprising presenting any saved or captured

comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search.

31. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 28,

selecting any results from the search containing content of interest for future reference in response to no matches; and

storing any selected search results in the URL personal databook collection object.

32. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 31,

presenting a dialogue box to enter comments related to any stored search results; and

storing any comments in association with the stored search results.

33. (New) The method of claim 1, further comprising presenting any reason why a selected URL was previously visited in response to positioning a computer pointing device on a selected match in the results from the search.
